

Titan™ Skin Tightening

The Titan Procedure is a safe, non-surgical process that uses an infrared light (stimulates new collagen) source to tighten skin and reverse the signs of aging. Titan laser technology gives you an all natural option to actively turn back the clock on aging skin that has become loose and has lost its firmness without surgery. In addition, Titan can stimulate long-term collagen rebuilding that leaves patients with younger skin. The Titan Procedure treats lax and redundant skin throughout the body.

Areas: Abdomen, Thighs, Full Face, Neck, Forehead

How does the Cutera Titan work?

Titan utilizes a safe infrared light to heat the dermis well below the skin's surface. It is a non-ablative, nonsurgical lifting procedure which causes the collagen in the dermis to contract and tighten. The Titan employs infrared light to lift and tighten the skin so that gravity changes are reverse. During the procedure, the skin's top surface (epidermis) is protected through continuous cooling with the Titan hand piece.

What areas respond best to the Titan procedure?

Patients have been successfully treated on many areas of the body. The most common areas treated are the jaw line, under the chin, and the abdomen.

Who can be treated?

Since the Titan procedure heats tissue under the skin's surface, patients of any skin type or age can be treated. Your physician can advise you if the Titan is right for you.

How many treatments will I need?

Although a single treatment has produced very good results for many patients, it is quite common for patients to have two or three treatments over a few months. Your physician will advise you as to the number and frequency of treatments recommended for optimal results.

What happens after the treatment?

Immediately following the treatment, you may notice some redness and mild swelling in the treated area. Both should dissipate within a few hours. There is no down-time or pain medication required.

What do treatments feel like?

With each Titan pulse you will feel a brief heating sensation. Some patients are more comfortable taking a mild pain reliever beforehand. Many patients are comfortable without any medication.

"I have been very pleased with the new infra-red Titan procedure in reducing lines and wrinkles and its increasing popularity for people who aren't ready for surgery."

John H. Hunts, MD, PhD
